Enterprise Services

For Delivering eBusiness Applications Fast

An organization of highly talented and experienced architects, designers and developers, Objectsoft can help your organization achieve the rewards of successful application development. We deliver high impact consulting to establish fundamental building blocks for your IT organization.

Assessments

Objectsoft's *Assessment* services examine the current state of your architecture. Specialized services include application architecture assessments, security and privacy assessments, HIPAA assessments and development environment assessments.

Project Management

Objectsoft team members plan and execute. We focus on a proven development process to avoid costly mistakes. Planning, following a process, and execution are the mantra for the Objectsoft organization. Our *Project Management* services help you deliver projects on time and within budget.

Application Architecture

Application architecture can be applied to any technology. Our *Application Architecture* services utilize proven designs and implementation to give you maximum flexibility, capability, reuse and performance from your applications.

Internet Architecture

We've utilized years of experience with clients to create Internet applications that are deployed around the world. Objectsoft's *Internet Architecture* services will help you design and plan for application delivery over the Internet.

Wireless Architecture

Objectsoft has some of the most comprehensive experience in the

industry. Our *Wireless Architecture* with resources required to implement successful wireless deployments.

Security Architecture

Objectsoft provides application security infrastructure services to enable robust and secure eBusiness applications. Services include assessments, design and implementation.

Data Architecture

Data is fundamental to any architecture. Our data architects and designers use our *Data Architecture* services help you design and implement data architectures that will scale to millions of users.

Object Oriented Design

Fundamental to most applications is a strong object design. Objectsoft's *Object Oriented Design* services helps your organization design and implement base components for continual use in your organization. A common software model saves time and money while increasing the quality of the software you deliver.

Infrastructure Development

We bring the experience of past development with us when designing and implementing infrastructure for applications. Objectsoft can assist in the creation of all layers from data access to user interface development. All software is developed with a process and methodology to deliver document and source code for easy maintenance.

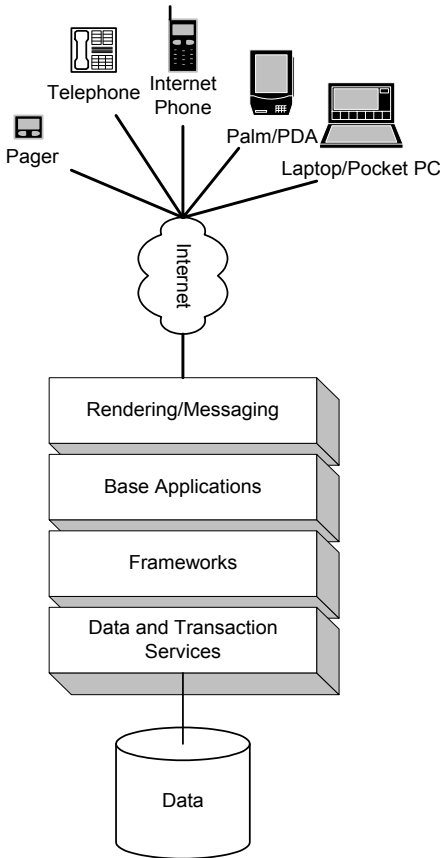

Experienced Management

Objectsoft's management team has experience in embedded operating systems, client/server, mainframe technologies, UNIX, relational databases, OO, Internet technologies and wireless deployments. We combine these skills with industry accepted project management processes to deliver quality projects on time and within budget.

Objectsoft's Portal Fast Start

For Delivering eBusiness Applications Fast

Application Infrastructure

Writing infrastructure is difficult, time consuming and expensive. Objectsoft relieves you of this burden by providing a flexible and robust application development platform called *NotWired Portal Frameworks*.

Polished Base Applications

While some systems deliver frameworks and expect you to make all end-user applications, NotWired comes complete with polished applications ready to insert into your development project. These include groupware and collaboration, workflow processing, contact management, messaging and administrative applications.

Complete Application Security

Our portal fast start provides the software security infrastructure to support complete application security by users, groups or organizations.

Unified Database Definitions

NotWired contains very flexible data service layer to support events, contacts, workflow, users, security and preferences. It may be implemented in any database, directory service or legacy system.

Data and Transaction Adapters

All database services utilize adapters. NotWired adapters integrate with any enterprise system. CICS, XML, sockets and other adapters may be

implemented with some or all of NotWired services.

Extensible Object Model

NotWired contains an open and extensible object model to implement your business logic and rules. This becomes the core of a system that applications utilize as a common component to communicate with all application layers.

Complete Profile and Preference Management

Users can manage profiles and preference for applications in the portal. This framework may be modified to meet your needs and integrated into all applications.

Communications Frameworks

NotWired contains a complete messaging framework that can be adapted to enterprise solutions such as Notes and Exchange. This communications infrastructure forms the basis of workflow for applications.

Standards-Based Solution

Java applications deploy on any platform. NotWired facilitates integration with standards and supports HTML, WML, HDML, SMS, VoiceXML, SAX, SOAP, XML, JSP and EJB.

Documentation

All frameworks come with design and code documentation to help your team or project develop important applications quickly.

Objectsoft has the tools and expertise to insure success in today's fast paced environment. Contact us to build the best service offering in the business, deploy it faster and at a lower cost than all other solutions.
